

THE RURAL FINANCIAL INCLUSION PROJECT

Field Manual & Training Curriculum Syllabus

Developed By:	Karuna Anie Kosle Project Founder & Director	Partner Org:	Asha Welfare Society Pratapgarh, Uttar Pradesh
Venues:	NGO Spaces, Church Facilities, & Community Venues	Targets:	300+ Community Learners (Women, Youth, & Children)

1. PROGRAM OVERVIEW & CORE METHODOLOGY

Traditional financial literacy frameworks frequently encounter systemic failures in rural, infrastructure-scarce environments due to deep text-literacy barriers and highly inconsistent digital connectivity. This field manual outlines an alternative, **visual-first, tactile training methodology** engineered specifically to bypass technical limitations and build enduring financial autonomy among unbanked demographics.

Every module contained within this syllabus is optimized for deployment via a decentralized **"Train-the-Trainer" operational structure**. By onboarding, training, and managing local youth volunteers, the curriculum scales fluidly across isolated geographic clusters while maintaining standardized quality control, adaptable scheduling, and clear performance tracking benchmarks.

2. THE 7-PILLAR CORE SYLLABUS

PILLAR 1: BASIC BANKING & ACCOUNT MANAGEMENT

Target Audience: Rural Women & Local Youth

Objective: Transition unbanked individuals from high-risk domestic cash hoarding to formal, secure banking systems.

Key Concepts: Mechanics of foundational savings accounts (Jan Dhan accounts), structural interest accumulation, and navigating physical rural bank branches confidently.

FIELD ACTIVITY — THE PASSBOOK BLUEPRINT

Participants utilize oversized, structurally simplified replicas of standard bank passbooks to learn how to identify account balances, logged deposits, and formal withdrawals using visual layouts rather than advanced textual analysis.

PILLAR 2: SAVINGS & BUDGETING STRATEGIES

Target Audience: Rural Women & Village Children

Objective: Instill proactive wealth-preservation, liquidity tracking, and strategic resource-allocation habits.

Key Concepts: Differentiating critical fixed household costs, tracking fluctuating seasonal incoming cash flow, and building formalized community emergency pools.

FIELD ACTIVITY — THE CASH SORTING MATRIX

Utilizing physical localized clay piggy banks (Gullaks) and custom, tactile play money denominations, learners visually group and sort incoming family income to separate baseline living necessities from non-essential discretionary expenses.

PILLAR 3: DIGITAL PAYMENTS & ONLINE TRANSACTIONS

Target Audience: Local Youth & Rural Women

Objective: Establish deep technical competency, baseline familiarity, and confidence in navigating mobile peer-to-peer transaction systems.

Key Concepts: Structural mechanics of the Unified Payments Interface (UPI), application navigation logic, and the standard validation protocols for moving capital securely.

FIELD ACTIVITY — THE MOCK SCAN SIMULATION

To successfully isolate the learning environment from local network connectivity deficits, participants interact with durable, laminated mock QR codes and printed smartphone interfaces to thoroughly master verifying the recipient's legal name prior to validating any capital transfer.

PILLAR 4: LOANS & INTEREST FUNDAMENTALS

Target Audience: Rural Women & Household Managers

Objective: Insulate vulnerable community segments against aggressive, predatory informal lending networks through a clear understanding of formal institutional credit.

Key Concepts: Simple vs. compound interest formulas, identifying hidden long-term repayment costs, and leveraging government-backed micro-credit initiatives.

FIELD ACTIVITY — THE INTEREST COMPARISON MAPPING

An interactive, comparative chart layout mapping out the long-term debt trajectory of a standard institutional micro-loan directly alongside the steep, compounding repayment curve typical of informal village moneylenders.

PILLAR 5: FRAUD AWARENESS & FINANCIAL SAFETY

Target Audience: Local Youth & Rural Women

Objective: Construct an immediate psychological defense barrier against advanced digital financial fraud, targeted phishing, and social engineering scams.

Key Concepts: Absolute non-disclosure of critical validation protocols (UPI PINs/OTPs), verifying phone caller credentials, and immediate emergency notification paths for security breaches.

FIELD ACTIVITY — THE GOLDEN PIN RULE DRILL

Live interactive roleplay simulations where field instructors replicate standard telephone scams. Learners practice immediate refusal patterns, anchoring the foundational digital rule: a PIN code is exclusively required to send currency, never to receive it.

PILLAR 6: RESPONSIBLE FINANCIAL DECISION-MAKING

Target Audience: Rural Women & Local Youth

Objective: Build long-term risk assessment frameworks and foresight covering major household and operational capital expenditures.

Key Concepts: Mitigating heavy cyclical expenses (agriculture inputs, educational timelines, healthcare) without causing abrupt day-to-day liquidity collapses.

FIELD ACTIVITY — THE VITTIYA TIMELINE

A collaborative macro-mapping session where cohorts chart a rolling 12-month community calendar to pre-identify predictable income drops and build targeted, preemptive household savings milestones.

PILLAR 7: INTRODUCTORY CONCEPTS RELATED TO INVESTING

Target Audience: Local Youth

Objective: Introduce low-risk, highly accessible formal wealth-preservation avenues structured for rural micro-economies.

Key Concepts: Fixed Deposits (FDs), structured Recurring Deposits (RDs), and capital preservation frameworks backed by national micro-savings programs.

FIELD ACTIVITY — THE GROWTH LADDER TRACKING

A highly visual, clean geometric scaling matrix demonstrating the secure, compounding expansion of nominal monthly deposits held inside formal banking lines across 1, 3, and 5-year horizons versus zero static storage.

3. OPERATIONAL IMPLEMENTATION GUIDELINES

Volunteer Delivery Protocol: Active field sessions must be strictly capped at a maximum duration of 45 minutes to seamlessly accommodate the daily operational schedules of working rural cohorts. To maintain pedagogical efficiency, instructors must enforce a strict 1:1 balance between conceptual delivery and direct, hands-on student interaction with the corresponding field toolkit assets.

Performance Tracking & Assessment: Progress must be logged systematically by the lead field volunteer at the conclusion of each module's simulation drill. Practical mastery indicators are validated only when a learner demonstrates autonomous, unassisted execution of the target transactional competency, establishing clear qualitative metrics before final compilation.
